

## Addition Strategies

**Adding Zero** – The sum is always the other number (not the 0).

**Counting on by 1 or 2** – Put the large number in your head and count on...

**Sums to 5** – What are different ways to make 5?

**Sums to 10** – What are different ways to make 10?

**Doubles** – Memorize your doubles!

**Adding 10's** – Keep the 1 in the tens place and put the unit digit in the ones place.

**Double Plus One** – Know your doubles and count on by 1.

**Doubles Plus Two** – Share a double; OR take one and pass it on to make a double.

**Nines** – Put down a one in the tens place. What is the digit minus 1? Put your new digit in the ones place to create your sum.

**Change the Order** – The sum is the same no matter which order you add two digits.
